

Report Of:

- **2012 Ontario Building Code - Part 4**

WARNING

No representation or warranty is given that your particular application of these products complies with relevant building codes or that the fasteners provided or used are appropriate for your application. Therefore consult with professionals and local building officials before beginning work: (i) to ensure compliance with relevant building codes for your application and for your proposed use of fasteners; (ii) to ensure the integrity of the structural components in connection with which these products are to be used; (iii) to identify appropriate safety gear that is to be used during installation such as a safety harness when working above ground; (iv) to ensure that the work area is free from utilities, services and hazards; and, (v) to clarify any instructions or warnings that may not be clear. Work in a safe manner wearing protective gear such as gloves, eyewear, headwear, footwear and clothing. When using tools always comply with operation manuals and instructions. Metal and glass may have sharp edges and could fragment or splinter during or as a result of handling or cutting. Do not use these products in connection with any substance that is or may be harmful or corrosive to the products. Inspect and maintain these products and the structural components that they are used in connection with on a regular basis using professionals when appropriate. These instructions have been prepared for certain standard residential applications. Obtain professional advice for any non-standard or non-residential application.

Peak® RailBlazers® Aluminum Railing System

Engineering Review for Compliance with Ontario Building Code Part 4

Appendix B Assembly Drawings

1 Overview

The Peak® RailBlazers® Aluminum Railing System is intended to act as a guard or barrier to protect the public from a fall. The objectives were to complete a structural review of the structural components based in Limit States Design, in accordance with applicable material standards and the Part 4 of the Ontario Building Code 2012 including updates to May 25, 2022.

The following specified loads apply:

- Concentrated load of 1 kN applied in any direction at any point along the top of guard.
- Uniformly distributed load of 0.75 kN/m applied in any direction along the top of guard.
- Uniformly distributed vertical load of 1.5 kN/m applied along the top of guard.
- Concentrated infill load of 0.5 kN applied anywhere within the guard.
- Uniform wind load per the limits shown in Appendix B Assembly Drawings

The following structural components were evaluated:

1.1 Infill Elements

- Aluminum pickets 38 mm (1½") wide - Dwg. Title "PEAK® RailBlazers® Railing Assembly with Wide Pickets"
- Glass panels 6mm thick tempered glass up to 1676 mm (66") wide - Dwg. Title "PEAK® RailBlazers® Railing Assembly with Glass Panel"

1.2 Rail Elements

- Post – Dwg. Title "Peak® Railblazers® Posts"
- Hand rail – See Report Assembly drawings
- Base rail – See Report Assembly drawings
- Stair hand rail – See Report Assembly drawings
- Stair base rail – See Report Assembly drawings

1.3 Connectors

- Horizontal angle brackets – Dwg. Title “Peak Railblazers® Brackets and Connectors”
- Wall mount brackets – Dwg. Title “Peak® Railblazers® Brackets and Connectors”
- Mid/stair/end fascia mount bracket – Dwg Title “Peak® Railblazers® Fascia Brackets”
- Corner fascia mount bracket – Dwg. Title “Peak® Railblazers® Fascia Brackets”
- Stair hand and base rail bracket – Dwg. Titles “Aluminum Railing – Stair Railing Assembly with Pickets” and “Aluminum Railing – Stair Railing Assembly with Wide Pickets”

The complete list of all components (including non-structural components) for the system is included in Appendix A.

2 Infill Elements

The primary infill elements include the following:

- Aluminum pickets 38 mm (1½”) wide
- Glass panels of 6mm (1/4”) thickness and up to 1676 mm (66”) wide

This review is based on information and drawings provided by Peak Products Manufacturing Inc. (Peak) for the elements listed above.

2.1 Aluminum Infill Elements

Our analysis is based on the following information:

- Loads: Prescribed by the Ontario Building Code. See Section 1.0 Overview.
- Resistance: Completed in accordance with CAN/CSA S157-17, Strength Design in Aluminum.
- Section properties: Information was provided by Peak. Calculations were completed in accordance with CAN/CSA S157-17.
- Load configuration: Span and bearing lengths were provided by Peak.

2.2 Glass Infill Elements

Our analysis is based on the following information:

- Loads: Prescribed by the Canadian building codes. See Section 1.0 Overview.
- Resistance: Completed in accordance with ASTM E1300-16, Standard Practice for Determining Load Resistance of Glass in Buildings.
- Material: Tempered glass in accordance with ASTM E1300-16 per information and drawings provided by Peak.
- Section properties: Determined from drawings provided by Peak.

- Load configuration: Span and bearing lengths were provided by Peak.
- Allowable deflection: The allowable deflection was calculated based on preventing fall-out of the glass from frame.

3 Rail Elements

3.1 General Rail Elements

The general rail elements include the hand rail, stair hand rail, base rail, and posts. An analysis was completed based on the worst-case configuration for these elements.

- Loads: Prescribed by the Canadian building codes. See Section 1.0 Overview.
- Resistance: Completed in accordance with CAN/CSA S157-17, Strength Design in Aluminum.
- Section properties: Information was provided by Peak. Calculations were completed in accordance with CAN/CSA S157-17.
- Fastener resistance: Completed in accordance with CAN/CSA S16-2021, Design of Steel Structures.
- Load configuration: Span and dimensions were provided by Peak. Posts were modeled as cantilevers, fixed at the base. The results from our analysis show the maximum span that can be achieved, as calculated from the material and fastener resistances.

4 Connectors

4.1 General Connectors

The general connectors included the horizontal brackets, wall mount brackets, mid/stair/end fascia mount bracket, corner fascia mount bracket, and stair hand and base rail brackets. An analysis was completed based on the worst-case configuration for these elements.

- Loads: Prescribed by the Canadian building codes. See Section 1.0 Overview.
- Resistance: Completed in accordance with CAN/CSA S157-17, Strength Design in Aluminum and CAN/CSA S16-2021, Design of Steel Structures.
- Section properties: Information was provided by Peak. Calculations were completed in accordance with CAN/CSA S157-17.
- Load configuration: Span and dimensions were provided by Peak.
- Connections to the base building are included as part of this review, including but not limited to the rail and post connections.

5 Results

A full set of calculations and results is presented in RDH's compiled engineering review package. The engineering package includes:

- Dimensioned drawings of each component, including extrusion drawings.
- Calculation sheets for the structural capacity of components listed in 1.0 Overview.

The above documents contain proprietary information, and as such, have not been included in this report.

6 Conclusion

The Peak® RailBlazers® Aluminum Railing System meets the requirements within Part 4 of the Ontario Building Code 2012 including updates to May 25, 2022. Limitations of compliance are defined in the assembly drawings presented in Appendix B.
